Strategic and operational practices

At this school:

- · Finlay Douglas is the Senior Information Risk Officer (SIRO).
- · Lee Varga is the Data Protection Officer (DPO) with responsibility for data protection compliance.
- Staff are clear who the key contact(s) for key school information are (the Information Asset Owners). We have listed the information and information asset owners in the Schools Information Asset Register.
- We ensure staff know to immediately report, and who to report to, any incidents where data protection may have been compromised, such as when passwords for sensitive systems or devices are lost or stolen, so that relevant action(s) can be taken.
- \cdot All staff are DBS checked and records are held in one central record.
- \cdot We have approved educational web filtering across our wired and wireless networks.
- \cdot We also have additional layers of monitoring across our networked systems.
- We monitor school e-mails / blogs / online platforms / social media / web searches / web traffic, to ensure compliance with the Acceptable Use Agreement. As well as monitoring usage, we may also monitor content of these streams.
- We follow Local Authority guidelines for the transfer of any data, such as MIS data or reports of children, to professionals working in the Local Authority or their partners in Children's Services / Family Services, Health, Welfare and Social Services.
- \cdot All staff have their own unique username and private passwords to access school systems. Staff are responsible for keeping their passwords private.
- \cdot We require staff to use strong passwords for access into our MIS systems and cloud storage.
- We require that any personal/sensitive material must be encrypted if the material is to be removed from the school, and limit such data removal. We have an approved cloud storage platform so staff can access sensitive and other data from home, without need to take data home.
- School staff who set up usernames and passwords for e-mail, network access and other online services work within the approved system and follow the security processes required by those systems.
- \cdot We ask staff to undertake house-keeping checks at least annually to review, remove and destroy any digital materials and documents which need no longer be stored.

Technical or manual solutions

- \cdot We require staff to either log-out or screen-lock systems when leaving their computer.
- · Staff have secure areas on the network to store sensitive documents or sensitive photographs.
- \cdot We use <u>DO NOT</u> use email to send attached documents outside the school.
- \cdot We use encrypted flash drives/encrypted tablets if staff have to take sensitive information off site.
- \cdot We use the SIMS to securely transfer pupil data to/from other schools.
- \cdot We use Egress Switch to securely transfer files to other institutions.
- \cdot We use Google Drive for cloud document storage. No other cloud storage is permitted.
- \cdot We use 2-factor authentication for remote access to sensitive data in cloud storage
- \cdot We store any sensitive/special category written material in lockable cabinets in a lockable area.
- · All servers located are in locked rooms or cabinets and managed by DBS-checked staff.
- \cdot We use 2-factor authentication for remote access into our systems.
- We store back-up media in secure cabinets/rooms. No back-up media leaves the site on mobile devices.
- \cdot Off site back-ups are encrypted.
- \cdot We use RedStor / MS Backup / Duplicati for disaster recovery on our Windows servers.
- \cdot We also use Xen image management for disaster recovery on all our servers.
- We comply with the WEEE directive on equipment disposal, by using an approved disposal company for disposal of IT equipment. For systems (such as servers, printers, etc), where any protected or restricted data has been held, the storage devices are securely wiped (or the storage device is removed and physically destroyed if secure wiping is not possible).
- \cdot Portable equipment loaned by the school (for use by staff at home), where used for any protected data, is disposed of through the same procedure.
- \cdot Paper based sensitive information is disposed of by shredding, using a crosscut shredder.
